

## Notes on School-Data-Science

### What?

This folder contains code and data analysis from two projects completed at NHH.

TECH2 is a data wrangling task using public statistics of electricity prices and export numbers between Norway and Germany, addressing important political questions.

(GRADE: B) **Note:** The actual data is missing on GitHub due to its size.

TECH4 is a linear programming task, solved both on paper, and using Python code. The task has few practical implications in itself, but required creativity and interpretation to solve. (GRADE: A)

### Why?

I share these projects to further display skills developed in coding and analysis.

### Disclaimer

Keep in mind these projects are answering to concrete tasks within a certain curriculum, meaning that solutions may have limitations based on this.
